1b. Thermal Power Plant with Data Acquisition Frame Mounted

A mobile laboratory-scale steam plant for experiments in thermodynamic principles.:

- Thermodynamic laws of energy conservation
- Steady flow energy equation
- Thermal efficiency and the control surface
- Rankine cycle analysis
- The Willans line

A mobile frame contains all the parts of the test set. An electric pump draws from a reservoir (included) to deliver water to an electrically-heated boiler. The boiler includes a safety valve, water level gauge and 'blow-down cock'. The boiler produces steam to turn a two-cylinder steam motor. The used steam from the motor outlet passes through a mains water-cooled condenser, then down to a waste tank or to a measuring vessel (supplied). includes a stopwatch and thermometer to allow accurate measurement of the flow and temperature of the condensate (steam flow).

The equipment includes a band-brake dynamometer with a digital torque and speed display, to measure and display motor speed, torque and power. Thermocouples connect to a digital temperature display to measure and display temperatures at key points in the test set. A throttling calorimeter allows students to measure the dryness fraction of the steam.

Two mechanical gauges show the boiler and engine inlet pressures. A meter shows the electrical power supplied to the heaters in the boiler

#### Learning outcomes

- Steam plant performance, including the Rankine cycle analysis and the Willans line
- Marcet boiler experiment on saturated steam (pressure temperature relationship)

**M o t o r p o w e r :** Approximately 90 W at 2000 rev.min<sup>-1</sup>

**B o i l e r :** Electrically heated by two independently-switched immersion heaters. Maximum experiment pressure approximately 350 kPa (set by 400 kPa pressure relief safety valve)

#### Instrumentation and measurement:

- Throttling calorimeter and thermocouple to measure the dryness fraction of the steam
- Dynamometer and display unit for motor speed and power measurement
- Pressure gauges for boiler and engine (motor) inlet pressures, including electronic transducers for connection to Data Acquisition
- Thermocouples and display for steam and cooling water temperatures
- Power meter for heater power input, including an output for Data Acquisition
- Calibrated vessel with stopwatch and thermometer for condensate (steam flow) measurement

#### Data Acquisition:

- All mains connectors and cables
- STP (shielded twisted pair) cables for equipment connection
- Data Export: – XLSX file (default) – HTML file (optional)

#### Software features include:
